I have my first digital video camera and, for the first time, the option to edit my long and boring captures. While I am very experienced at editing digital photos, this is an entirely new field for me. It seems to me that this "for dummies" version is still too advanced for me. I need one "for complete morons", apparently. This is a reflection on me, not on the book, which seems to be very thorough. It goes into more detail than I need. I don't capture video with my phone; I don't have capture problems; the odds of my ever needing nightvision videos are nil; I'm not sure I need to know what the NTSC standards are, and on and on. All I really wanted was a step-by-step way to: *use the software that came with my camera to cut out unnecessary areas and restitch the remainder; *suggestions on how to make a video capture flow, more or less seamlessly, despite the editing; *ditto with the soundtrack; *an overview of easy video editing programs that I can upgrade to if I should ever outgrow my camera's software (which doesn't look likely right now.) *workflow suggestions as to how to backup and preserve video (I don't have that much faith that DVD's are still going to be in use a decade from now), so I wanted a general overview of options and suggestions. I got the first four. It was a bit more technical than I wanted, but that may be because I didn't realize the full software/hardware implications, let alone the standards, frame rates, aspect ratios, interlacing, capture cards, or video converters issues--and I've still purposefully avoided the "advanced video editing" chapter. It seems to me that people, not too much brighter than I and with similarly-equipped home computers, have managed to edit their videos w/o knowing all this.
