Single Case Research Methodology: Applications In Special Education And Behavioral Sciences

Synopsis

In this anticipated new edition of Single Case Research Methodology, David L. Gast and Jennifer R. Ledford detail why and how to apply standard principles of single case research methodology to oneâ™s own research or professional project. Using numerous and varied examples, they demonstrate how single case research can be used for research in behavioral and school psychology, special education, speech and communication sciences, language and literacy, occupational therapy, and social work. This thoroughly updated new edition features two entirely new chapters on measurement systems and controversial issues in single subject research, in addition to sample data sheets, graphic displays, and detailed guidelines for conducting visual analysis of graphic data. This book will be an important resource to student researchers, practitioners, and university faculty who are interested in answering applied research questions and objectively evaluating educational and clinical practices.

Customer Reviews

I find this book to be extremely comprehensive, understandable, and interesting. I have learned a great deal about SCRD through this book, and I recommend it to all of my doctoral students pursuing SCRD dissertations and research projects. This is the primary resource we refer to for all SCRD questions. Highly recommended.

How can I say I "LOVE" action research? This book was required by my professor in my Master's program. This was the best price available for this textbook.

This book was in great condition. The information is presented in great detail with helpful examples. I got an A in the class!!

Required text for class, a great resource for single study design.

Awesome
